

Press Release – September 2007

Maurer's X-Car now equipped with a new multi-media seat

Munich. An integrated sound system and a video camera – these are the new features added to the spectacular X-Seat of Munich roller coaster producer Maurer Soehne.

Maurer Soehne's patented X-Car has been awarded several prizes for letting riders experience the fun of inversions and uplifting forces without disturbing shoulder or additional leg harnesses.

Core of the X-Car is the X-Seat, the innovative seat safety system, which also wins through its excellent ergonomics, its first class design and extraordinary quality. The amusement ride professionals based in Munich do not rest on their laurels but are adding new features to their extraordinary seat system: the multi-media version of the X-Set owns an integrated sound system and a built in video camera.

The multi-media X-Seat's back rest has been extended to reach above the height of the shoulders and is equipped with stereo loudspeakers. The passengers may individually choose his favoured music piece and adjust the volume by using the control panel installed in the hip bar.

The video option of the multi-media X-Seat has a camera integrated into the reverse of the seat's back rest. It takes an on-ride video of the passenger. This high-value extra produces a special kick and creates an unforgettable experience. When built in together, the sound and the video system clearly increase the attraction of each and every X-Car Coaster
